

CLAIMS

1. A package (1) comprising at least two opposite walls (3, 5) which are bonded together along a longitudinally extending bonding seam (16, 17), each wall (3, 5) comprising at least two bonded-together wall members (6, 7; 8, 9), which are folded onto each other about a fold line (10, 11), characterized in that parts (26, 27) of the walls (3, 5) positioned on either side of the wall members (6, 7; 8, 9) can be moved away from each other in directions (P1, P2) extending parallel to the longitudinal direction of the bonding seam (16, 17), wherein the opposite wall members (6, 7; 8, 9) can be moved apart, bounding an opening that gives access to a space present inside the package (1).
5
2. A package (1) according to claim 1, characterized in that the wall members (6, 7; 8, 9) of one wall (3, 5) are positioned on a side of said one wall (3, 5) remote from the other wall (3, 5), and vice versa.
10
3. A package (1) according to any one of the preceding claims 1-2, characterized in that a wall member extends parallel to the associated wall (3, 5).
15
4. A package (1) according to claim 3, characterized in that the wall member is bonded to the associated wall (3, 5).
20
5. A package (1) according to any one of the preceding claims 1-4, characterized in that the wall members (6, 7; 8, 9) of one wall (3, 5) extend in a direction opposed to the direction in which the wall members (6, 7; 8, 9) of the other wall (3, 5) extend.
25
6. A package (1) according to any one of the preceding claims 1-5, characterized in that the bonded-together wall members (6, 7; 8, 9) of a wall (3, 5) extend in a direction transversely to the longitudinal direction of the bonding seam (16, 17) over at least substantially the entire package (1).
30
7. A package (1) according to any one of the preceding claims

1-6, characterized in that the walls (3, 5) of the package (1) are folded double in a direction away from the bonding seam (16, 17), said folded-together walls (3, 5) being sealed by means of a further bonding seam (16, 17).

5 8. A method of manufacturing a package (1) according to any one of the preceding claims, characterized in that longitudinal sides of a strip-shaped foil are bonded together, at least two pairs of wall members (6, 7; 8, 9) are folded onto each other about fold lines (10, 11) extending parallel to the longitudinal side, the wall members (6, 7; 8, 9) of each pair are bonded together, the pairs of wall members (6, 7; 8, 9) are positioned opposite each other, and the walls (3, 5) positioned on either side of the wall members (6, 7; 8, 9) are bonded together by means of a bonding seam (16, 17) extending transversely to said longitudinal sides.
